FIRE PUMPS & ACCESSORIES

The Pump People®

ABOUT US

Patterson has built a trusted reputation for reliable pump installations worldwide - whether satisfying urban water or waste demands, harnessing and controlling ravaging floods, reclaiming arid deserts, taming rampaging and devastating fires, or protecting the planet's ecological balance, our pumps are trusted.

Around the globe, wherever liquid moves, in large volume or high pressure, you will find Patterson heavy-duty pumps and packaged systems. The world looks to Patterson to enhance safety and comfort in HVAC and fire suppression technology, exceeding pumping demands in water supply, irrigation, flood prevention, and wastewater treatment, make industrial solutions into liquid transfers, and fulfill heating or cooling needs to each of our clients.

All Patterson Fire Pumps and accessories are engineered to meet, or exceed, all applicable codes, including UL listings, FM and NYCBSA approvals and all NFPA-20 standards.

HORIZONTAL SPLIT CASE

SINGLE AND MULTISTAGE

Patterson's Horizontal Split Case (HSC) single and multistage line-up of UL Listed/FM Approved fire pumps are the tried-and-true workhorses of the pumping industry. Designed for durability, these pumps lead the world at providing dependable life and property coverage for those who take fire protection seriously.

The rugged single and multiple stage split case designs offer a range of high- and low-pressure pumping while still allowing for in-line service without disturbing piping. All parts are standardized and accurately manufactured to allow for true alignment, balance and increased overall durability.

Whether your fire pump application requires an electric motor or a diesel engine, these listed and approved reliable pumps can be configured to meet your specific needs.

Horizontal Split Case Operating Specifications
Single/Multiple Stage (Diesel Units)
offerings at nominal speeds ranging
from 3000/2800/2600/2400/2100/1800/1500

Flow (gpm)	Pressure (psi)	Total Head (ft)
300	71 - 159	164 - 367
400	67 - 181	155 - 418
450	64 - 179	148 - 413
500	40 - 422	92 - 975
750	40 - 419	92 - 968
1000	40 - 396	92 - 915
1250	42 - 247	97 - 571
1500	49 - 285	113 - 658
2000	51 - 282	118 - 651
2500	46 - 234	106 - 541
3000	80 - 230	185 - 531
3500	71 - 265	164 - 612
4000	69 - 262	159 - 605
4500	66 - 256	152 - 591
5000	107 - 253	247 - 584

Horizontal Split Case Operating Specifications
Single/Multiple Stage (Electric Units, 50 hz)
offerings at nominal speeds ranging
from 3000/1500

Flow (gpm)	Pressure (psi)	Total Head (ft)
400	90 - 174	208 - 402
450	87 - 171	201 - 395

VERTICAL IN-LINE

FIRE PUMPS

Patterson's V.I.P. series of Vertical In-Line Fire Pumps offer a simple alternative to horizontal split case pumps in fire applications with lower flow rates. Their unique design also minimizes energy consumption while lengthening service life.

These fire pumps are easy to install into existing pipelines. With the inlet and outlet on a common center line, only standard piping supports on either side of the pump are needed. These pumps are designed with a mounting foot that is compatible with a standard ANSI flange.

Designed for durability, every pump has standard packing and a two-piece gland. Design accommodates a standard JP/JM motor. An integral clean-out port on the suction side enables cleaning without disassembly.

END SUCTION FIRE PUMPS

Some offerings are available in two configurations: frame-mounted or close-coupled, which can be flanged or threaded. These pumps are engineered to last with a precision-cast, dynamically balanced and enclosed impeller that minimizes vibration and maximizes bearing life. Engineered for lasting integrity with standard packing and a shaft sleeve, each unit is hydrostatically pressure-tested to 1-1/2 times shutoff before shipping.

Removing the rotating element without disturbing suction and discharge connections is easy because of our unique, back pullout design. Registered fits at the volute and volute cover maintain pump alignment. With their compact design, these pumps are perfect for applications where space is limited.

VERTICAL TURBINE FIRE PUMPS

Among the most versatile pumps in Patterson's line-up, the Vertical Turbine Fire Pump stands on Patterson's more than 50 years of vertical pump expertise. Employing the latest design concepts and engineering technology, these pumps are ideal for firefighting.

They can be staged as needed to meet specific pressure requirements, with lengths and construction adaptable to the application. And their space-saving vertical design minimizes floor space requirements. Standard construction consisting of cast iron discharge head, flanged steel columns, alloy shafting, and cast-iron bronze fitted bowls. Open line shaft construction is standard; special metallurgies are available.

PRE-PAC SYSTEMS

FIRE PUMPS

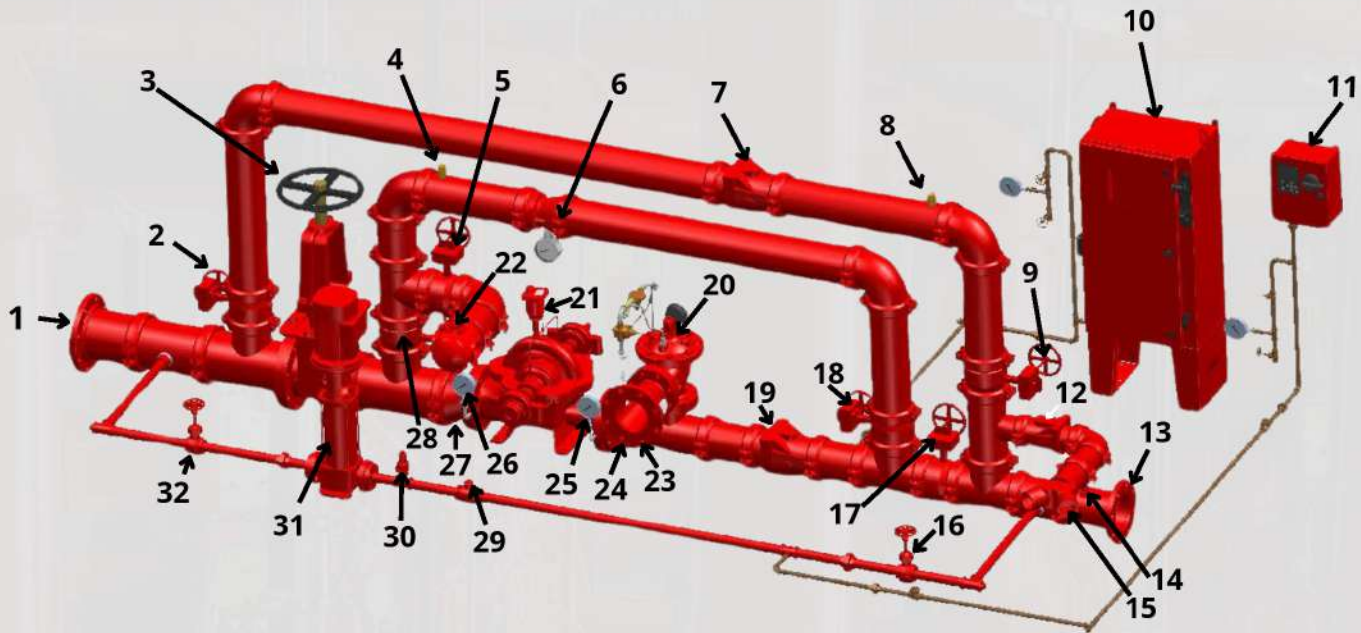

The Patterson Pre-Pac is one of the most popular and reliable, self-contained fire protection pump systems on the market today. It is compact, highly efficient, and cost effective. From high-density residential complexes to industrial and commercial sites, the Pre-Pac helps you properly protect the lives and property in your care even while facing budget constraints and space limitations.

Created to provide highly efficient, quality fire control in less space and for less costs. Each Pre-Pac is built in our environmentally controlled facility to your exact specifications. Our knowledge, expertise and complete line of quality fire pumps and accessories ensures that your Pre-Pac system will provide the very best in pumping technology when you need it. We can also provide special metallurgies for seawater service.
